Organising Labour in Globalising Asia Andrew Brown 2003-09-02 This book offers wide-ranging insights into the organising capacities of workers in Asia today. Nine case-studies examine workers' responses to class relations through independent unions, non-government organisations (NGOs) and more (dis)organised struggles. Countering the notion that globalisation holds entirely negative consequences for labour organisation, the authors reveal some of the openings for local activism which can arise from transnational production arrangements. The volume covers the "second-tier" industrializers - China, Thailand, Malaysia, the Philippines, Indonesia, India and Bangladesh. Interdisciplinary in nature, it will be of great interest to students and scholars of Asian studies, development studies and international labour

studies.

Nigeria International Monetary Fund Staff 2007-08-03 This paper discusses key findings of the annual progress report on implementing the National Economic Empowerment and Development Strategy (NEEDS)-Nigeria's Poverty Reduction Strategy Paper. The progress report highlights key accomplishments and shortcomings as well as outstanding issues. Key macroeconomic indicators improved during the last years, reflecting the authorities' attention to macroeconomic management, an improved policy framework, and favorable external environment. Non-oil growth was robust, and despite unrest in the Niger Delta, oil production could fully fill the OPEC quota. The budgetary oil price rule was an essential anchor of fiscal policy.

Why Samantha Kleinberg 2015-11-16 Can drinking coffee help people live longer? What makes a stock's price go up? Why did you get the flu? Causal questions like these arise on a regular basis, but most people likely have not thought deeply about how to answer them. This book helps you think about causality in a structured way: What is a cause, what are causes good for, and what is compelling evidence of causality? Author Samantha Kleinberg shows you how to develop a set of tools for thinking more critically about causes. You'll learn how to question claims, identify causes, make decisions based on causal information, and verify causes through further tests. Whether it's figuring out what data you need, or understanding that the way you collect and prepare data affects the conclusions you can draw from it, Why will help you sharpen your causal inference skills.

Curious? Todd Kashdan 2009-04-21 Dead cats. That's the image many people conjure up when you mention curiosity. An image perpetuated by a dusty old proverb that has long represented the extent of our understanding of the term. This book might not put the proverb to rest, but it will flip it upside down: far from killing anything, curiosity breathes new life into almost everything it touches. In Curious? Dr. Todd Kashdan offers a profound new message missing from so many books on happiness: the greatest opportunities for joy, purpose, and personal growth don't, in fact, happen when we're searching for happiness. They happen when we are mindful, when we explore what's novel, and when we live in the moment and embrace uncertainty. Positive events last longer and we can extract more pleasure and meaning from them when we are open to new experiences and relish the unknown. Dr. Kashdan uses science, story, and practical exercises to show you how to become what he calls a curious explorer—a person who's comfortable with risk and challenge and who functions optimally in an unstable, unpredictable world. Here's a blueprint for building lasting, meaningful relationships, improving health, increasing creativity, and boosting productivity. Aren't you curious to know more?

Making Sense of Data II Glenn J. Myatt 2009-03-04 A hands-on guide to making valuable decisions from data using advanced data mining methods and techniques This second installment in the Making Sense of Data series continues to explore a diverse range of commonly used approaches to making and communicating decisions from data. Delving into more technical topics, this book equips readers with

advanced data mining methods that are needed to successfully translate raw data into smart decisions across various fields of research including business, engineering, finance, and the social sciences. Following a comprehensive introduction that details how to define a problem, perform an analysis, and deploy the results, Making Sense of Data II addresses the following key techniques for advanced data analysis: Data Visualization reviews principles and methods for understanding and communicating data through the use of visualization including single variables, the relationship between two or more variables, groupings in data, and dynamic approaches to interacting with data through graphical user interfaces. Clustering outlines common approaches to clustering data sets and provides detailed explanations of methods for determining the distance between observations and procedures for clustering observations. Agglomerative hierarchical clustering, partitioned-based clustering, and fuzzy clustering are also discussed. Predictive Analytics presents a discussion on how to build and assess models, along with a series of predictive analytics that can be used in a variety of situations including principal component analysis, multiple linear regression, discriminate analysis, logistic regression, and Naïve Bayes. Applications demonstrates the current uses of data mining across a wide range of industries and features case studies that illustrate the related applications in real-world scenarios. Each method is discussed within the context of a data mining process including defining the problem and deploying the results, and readers are provided with guidance on when and how each method should be used. The related Web site for the series (www.makingsenseofdata.com) provides a hands-on data analysis and data mining experience. Readers wishing to gain more practical experience will benefit from the tutorial section of the book in conjunction with the Traceis™ software, which is freely available online. With its comprehensive collection of advanced data mining methods coupled with tutorials for applications in a range of fields, Making Sense of Data II is an indispensable book for courses on data analysis and data mining at the upper-undergraduate and graduate levels. Managing Multiple Sclerosis Naturally Judy Graham 2010-06-24 A totally revised and updated edition of

the first book to offer a holistic approach to slowing the progression of MS • Provides guidance on special diets and nutritional supplements, exercise, alternative therapies, and the effects of negative and positive thoughts on MS • Explains how to reduce toxic overload from mercury and chemicals • Includes life wisdom and coping strategies from others who suffer with MS Judy Graham is an inspiration. Diagnosed with multiple sclerosis when she was just 26 years old, 35 years later Judy Graham is still walking, working, and has successfully birthed and raised a son who is now an adult. In this totally revised and updated edition of her groundbreaking *Multiple Sclerosis*, first published in 1984, she shares the natural treatments that have helped her and many others with MS stabilize or even reverse the condition. Beginning with the effects of diet, she explains that many people with MS have been eating the wrong foods and shows which foods are “good” and “bad,” how to recognize food sensitivities, and how to correct nutritional deficiencies using dietary supplements. She also looks at reducing the body’s toxic overload, whether from mercury amalgam fillings, chemicals, or medications. She presents the exercises with proven benefits for MS she has found most reliable and appropriate, such as yoga, pilates, and t’ai chi, and explores alternative therapies that provide relief and support to the body’s efforts to control MS, including acupuncture, reflexology, shiatsu, reiki, and ayurveda. Most important are the insights she provides on the effects of negative thoughts on MS. She demonstrates how a positive mental attitude can actually slow down or even reverse the progression of this disease. Judy Graham is living proof that, as devastating as a diagnosis of MS is, life can still be lived to its fullest.

Micro and Nano Flow Systems for Bioanalysis Michael W. Collins 2012-12-13
Micro and Nano Flow Systems for Bioanalysis addresses the latest developments in biomedical engineering at very small scales. It shows how organic systems require multi-scale understanding in the broadest sense whether the approach is experimental or mathematical, and whether the physiological state is healthy or diseased. Micro- and nano-fluidics represent key areas of translational research in which state-of-the-art engineering processes and devices are applied to bedside monitoring and treatment. By applying conventional micro- and nano-engineering to complex organic solids, fluids, and their interactions, leading researchers from throughout the world describe methods and techniques with great potential for use in medicine and clinical practice. Coverage includes the seeming plethora of new, fine-scale optical methods for measuring blood flow as well as endothelial activation and interaction with tissue. Generic areas of modeling and bioelectronics are also considered. In keeping with the recurring theme of medicine and clinical practice, approximately half of the chapters focus on the specific application of micro- and nano- flow systems to the understanding and treatment of cancer and cardiovascular diseases. This book developed from an Expert Overview Session on "Micro & Nano Flows in Medicine: the way ahead" at the 3rd Micro and Nano Flows Conference (MNF2011) held in Thessaloniki, Greece. Additional chapters were included to enhance the international, state-of-the-art coverage.

Migration and Labour Markets in the Social Sciences Henrik Egbert 2007
The interplay of migration and labour markets is a phenomenon too diverse to be explained by a single theory. Thus, this volume, based on contributions presented during a workshop in Saarbrücken, Germany, brings together experts in migration research from economics, political science, and sociology. The rationale for choosing the topic is the existence of misconceptions and prejudices in public debate about migration. The contributions investigate the main effects of migration on labour markets for both, the home and the host country, and discuss normative, positive, and instrumental aspects of migration from different perspectives.

Out of the Black Hole Charles E. Donovan 2006 This is the first book to be published by a patient about the journey out of the black hole of depression thanks to the remarkable medical breakthrough procedure of vagus nerve stimulation. *Out of the Black Hole* is written by a patient for patients with easy-to-understand explanations which demystify this simple, safe procedure and helps patients make an informed decision about the surgery. Vagus Nerve Stimulation is not related to brain surgery or ECT. There are no cognitive impairments (i.e. memory loss) or drug interactions. Included is information about the potential side effects, benefits, insurance reimbursement codes and reimbursement process. Vagus nerve stimulation has been FDA approved for epilepsy since 1997 and in July of 2005 the FDA approved vagus nerve stimulation for chronic or treatment-resistant depression. Over 30,000 patients have safely been implanted with the device for epilepsy. The procedure is generally done on an out-patient basis. This is considered one of the major breakthroughs in medical device history which could potentially help the 4.5 million Americans who suffer from the debilitating illness of chronic depression.
