Against Islamophobia Arno Tausch 2007 While there is a never-ending debate on Islamism, Islamist terrorism and the identity of Europe vis-à-vis growing Muslim communities in Europe, there are hardly any solid cross-national data being presented on the real extent of the Islamist threat facing Europe, and on the social conditions that lead to Islamist radicalism. By and large, our rigorous quantitative results, based on the first systematic use of the Muslim community data contained in the 'European Social Survey' (ESS) all support a socio-liberal view of "migration" and "integration", compatible with much of the rest of current European political economic thinking regarding the future alternatives for the European Union, and contradict the very extended current alarmist political discourse in Western Europe.

Bursts Albert-Laszlo Barabasi 2010-04-29 A revolutionary new theory showing how we can predict human behavior-from a radical genius and bestselling author Can we scientifically predict our future? Scientists and pseudo scientists have been pursuing this mystery for hundreds and perhaps thousands of years. But now, astonishing new research is revealing patterns in human behavior previously thought to be purely random. Precise, orderly, predictable patterns... Albert Laszlo Barabasi, already the world's preeminent researcher on the science of networks, describes his work on this profound mystery in Bursts, a stunningly original investigation into human nature. His approach relies on the digital reality of our world, from mobile phones to the Internet and email, because it has turned society into a huge research laboratory. All those electronic trails of time stamped texts, voicemails, and internet searches add up to a previously unavailable massive data set of statistics that track our movements, our decisions, our lives. Analysis of these trails is offering deep insights into the rhythm of how we do everything. His finding? We work and fight and play in short flourishes of activity followed by next to nothing. The pattern isn't random, it's "bursty." Randomness does not rule our lives in the way scientists have assumed up until now. Illustrating this revolutionary science, Barabasi artfully weaves together the story of a 16th century burst of human activity-a bloody medieval crusade launched in his homeland, Transylvania-with the modern tale of a contemporary artist hunted by the FBI through our post 9/11 surveillance society. These narratives illustrate how predicting human behavior has long been the obsession, sometimes the duty, of those in power. Barabási's astonishingly wide range of examples from seemingly unrelated areas include how dollar bills move around the U.S., the pattern everyone follows in writing email, the spread of epidemics, and even the flight patterns of albatross. In all these phenomena a virtually identical, mathematically described bursty pattern emerges. Bursts reveals what this amazing new research is showing us about where individual spontaneity ends and predictability in human behavior begins. The way you think about your own potential to do something truly extraordinary will never be the same.

Developing Talent Across the Lifespan PETER HEYMANS 2013-05-24 This volume presents fascinating new theoretical perspectives and empirical findings on the life-span development of talent. It shows how talents are the result of the acquisition of a sequence of skills and how the acquisition of these skills is facilitated by changes in the individual's environment. It explores to what degree the development of high intelligence or achievement is similar to the development of specific domains such as personality, morality, painting, musical performance, or professional skills. It questions whether the development of talent observed for specific groups is similar to individual cases and how the different numbers of highly talented women and men in several domains are to be explained.

History of Anatomy R. Shane Tubbs 2018-11-30 A unique biographical review of the global contributors to field of anatomy Knowledge of human anatomy has not always been an essential component of medical education and practice. Most European

medical schools did not emphasize anatomy in their curricula until the post-Renaissance era; current knowledge was largely produced between the 16th and 20th centuries. Although not all cultures throughout history have viewed anatomy as fundamental to medicine, most have formed ideas about the internal and external mechanisms of the body—influences on the field of anatomy that are often overlooked by scholars and practitioners of Western medicine. History of Anatomy: An International Perspective explores the global and ancient origins of our modern-day understanding of anatomy, presenting detailed biographies of anatomists from varied cultural and historical settings. Chapters organized by geographic region, including Africa, the Middle East, and Europe, review the lives of those that helped shape our current understanding of the human form. Examining both celebrated and lesser-known figures, this comprehensive work examines their contributions to the discipline and helps readers develop a global perspective on a cornerstone of modern medicine and surgery. Offers a comprehensive and multidisciplinary examination of the history of anatomy Traces the emergence of modern knowledge of anatomy from ancient roots to the modern era Fills a gap in current literature on global perspectives on the history of anatomy Written by an internationally recognized team of practicing physicians and scholars History of Anatomy: An International Perspective is an engaging and insightful historical review written for anatomists, anthropologists, physicians, surgeons, medical personnel, medical students, health related professionals, historians, and anyone interested in the history of anatomy, surgery, and medicine.

The Formula Albert-László Barabási 2018-11-06 "This is not just an important but an imperative project: to approach the problem of randomness and success using the state of the art scientific arsenal we have. Barabasi is the person."--Nassim Nicholas Taleb, author of the New York Times bestselling The Black Swan and Distinguished Professor of Risk Engineering at NYU An international bestseller In the bestselling tradition of Malcom Gladwell, James Gleick, and Nate Silver, prominent professor László Barabási gives us a trailblazing book that promises to transform the very foundations of how our success-obsessed society approaches their professional careers, life pursuits and long-term goals. Too often, accomplishment does not equal success. We did the work but didn't get the promotion; we played hard but weren't recognized; we had the idea but didn't get the credit. We convince ourselves that talent combined with a strong work ethic is the key to getting ahead, but also realize that combination often fails to yield results, without any deeper understanding as to why. Recognizing this striking disconnect, the author, along with a team of renowned researchers and some of the most advanced data-crunching systems on the planet, dedicated themselves to one goal: uncovering that ever-elusive link between performance and success. Now, based on years of academic research, The Formula finally unveils the groundbreaking discoveries of their pioneering study, not only highlighting the scientific and mathematic principles that underpin success, but also revolutionizing our understanding of: Why performance is necessary but not adequate Why "Experts" are often wrong How to assemble a creative team primed for success How to most effectively engage our networks And much more.

Eros and Greek Athletics Thomas F. Scanlon 2002-02-07 Ancient Greek athletics offer us a clear window on many important aspects of ancient culture, some of which have distinct parallels with modern sports and their place in our society. Ancient athletics were closely connected with religion, the formation of young men and women in their gender roles, and the construction of sexuality. Eros was, from one perspective, a major god of the gymnasium where homoerotic liaisons reinforced the traditional

hierarchies of Greek culture. But Eros in the athletic sphere was also a symbol of life-affirming friendship and even of political freedom in the face of tyranny. Greek athletic culture was not so much a field of dreams as a field of desire, where fervent competition for honor was balanced by cooperation for common social goals. Eros and Greek Athletics is the first in-depth study of Greek body culture as manifest in its athletics, sexuality, and gender formation. In this comprehensive overview, Thomas F. Scanlon explores when and how athletics was linked with religion, upbringing, gender, sexuality, and social values in an evolution from Homer until the Roman period. Scanlon shows that males and females made different uses of the same contests, that pederasty and athletic nudity were fostered by an athletic revolution beginning in the late seventh century B.C., and that public athletic festivals may be seen as quasi-dramatic performances of the human tension between desire and death. Accessibly written and full of insights that will challenge long-held assumptions about ancient sport, Eros and Greek Athletics will appeal to readers interested in ancient and modern sports, religion, sexuality, and gender studies.

Smart Is Not Enough! Alan C. Guarino 2007-06-30 The Information Age is OVER -- In business today, it is all about TALENT!

"Smart Is Not Enough" explains the core issue of 21st century business. Forget technology - Forget outsourcing TALENT is the #1 challenge in your organization. Whether you're a CEO or an entry level college grad; whether you manage a staff or not, this book is for you. It can help in career planning, in developing your management strategy, or just help you understand the playing field in business today. Author Alan Guarino explains the full gamut of cutting-edge talent management, from how to find it, develop it, deploy it and lead it, to his South Pole Theory of "hidden talent" talent as a solution for the shortage of critical talent in the business

world of the 21st Century. The South Pole Theory explains that traditionally, corporations biased their talent searches towards those who performed at the top of their academic classes. Yet, some of the most successful executives and business leaders weren't good students themselves. Grades aren't the only predictor of success in the real business world. This book shares techniques for finding those determined, dedicated go-getters who fall through the cracks when we judge them solely on academics. To compete in business today, top companies need to cultivate every available source of talent. This book shows business leaders how to find and capitalize on this special pool of talent-- the future versions of people like Paul Orfalea, founder of Kinkos, Wayne Huizenga of Blockbuster Video, and many others. Alan Guarino (Marlboro, NY) is CEO and co-founder of the executive search firm Cornell International. His firm is now owned by Adecco, the largest recruiting company in the world.

Outliers Malcolm Gladwell 2008-11-18 From the bestselling author of Blink and The Tipping Point, Malcolm Gladwell's Outliers: The Story of Success overturns conventional wisdom about genius to show us what makes an ordinary person an extreme overachiever. Why do some people achieve so much more than others? Can they lie so far out of the ordinary? In this provocative and inspiring book, Malcolm Gladwell looks at everyone from rock stars to professional athletes, software billionaires to scientific geniuses, to show that the story of success is far more surprising, and far more fascinating, than we could ever have imagined. He reveals that it's as much about where we're from and what we do, as who we are - and that no one, not even a genius, ever makes it alone. Outliers will change the way you think about your own life story, and about what makes us all unique. 'Gladwell is not only a brilliant storyteller; he can see what those stories tell us, the lessons they contain' Guardian 'Malcolm Gladwell is a global phenomenon ... he has a genius for making everything he writes seem like an impossible adventure' Observer 'He is the best kind of writer - the kind who makes you feel like you're a genius, rather than he's a genius' The Times
