Visual Differential Geometry and Forms Tristan Needham 2021-07-13 An inviting, intuitive, and visual exploration of differential geometry and forms Visual Differential Geometry and Forms fulfills two principal goals. In the first four acts, Tristan Needham puts the geometry back into differential geometry. Using 235 hand-drawn diagrams, Needham deploys Newton's geometrical methods to provide geometrical explanations of the classical results. In the fifth act, he offers the first undergraduate introduction to differential forms that treats advanced topics in an intuitive and geometrical manner. Unique features of the first four acts include: four distinct geometrical proofs of the fundamentally important Global Gauss-Bonnet theorem, providing a stunning link between local geometry and global topology; a simple, geometrical proof of Gauss's famous Theorema Egregium; a complete geometrical treatment of the Riemann curvature tensor of an n-manifold; and a detailed geometrical treatment of Einstein's field equation, describing gravity as curved spacetime (General Relativity), together with its implications for gravitational waves, black holes, and cosmology. The final act elucidates such topics as the unification of all the integral theorems of vector calculus; the elegant reformulation of Maxwell's equations of electromagnetism in terms of 2-forms; de Rham cohomology; differential geometry via Cartan's method of moving frames; and the calculation of the Riemann tensor using curvature 2-forms. Six of the seven chapters of Act V can be read completely independently from the rest of the book. Requiring only basic calculus and geometry, Visual Differential Geometry and Forms provocatively rethinks the way this important area of mathematics should be considered and taught.

Structuralism (Psychology Revivals) Jean Piaget 2015-04-10 Originally published in English in 1971, structuralism was an increasingly important method of analysis in disciplines as diverse as mathematics, physics, biology, psychology, linguistics, sociology, anthropology and philosophy. Piaget here offers both a definitive introduction to the method and a brilliant critique of the principal structuralist positions. He explains and evaluates the work of the main people at work in the field – Claude Lévi-Strauss, Michel Foucault, Talcott Parsons, Noam Chomsky – and concludes that structuralism has a rich and fruitful future ahead of it. An indispensable work for serious students and working scholars in almost every field, the book is also an important addition to Piaget's life-long study of the relationship of language and thought.

Mathematics and Technology Christiane Rousseau 2008-10-29 This book introduces the student to numerous modern applications of mathematics in technology. The authors write with clarity and present the mathematics in a clear and straightforward way making it an interesting and easy book to read. Numerous exercises at the end of every section provide practice and reinforce the material in the chapter. An engaging quality of this book is that the authors also present the mathematical material in a historical context and not just the practical one. Mathematics and Technology is intended for undergraduate students in mathematics, instructors and high school teachers. Additionally, its lack of calculus centrality as well as a clear indication of the more difficult topics and relatively advanced references make it suitable for any curious individual with a decent command of high school math.

The Forty Rules of Love Elif Shafak 2010-02-18 In this lyrical, exuberant tale, acclaimed Turkish author Elif Shafak, author of The Island of Missing Trees (a Reese's Book Club Pick), incarnates Rumi's timeless message of love The Forty Rules of Love unfolds two tantalizing parallel narratives—one contemporary and the other set in the thirteenth century, when Rumi encountered his spiritual mentor, the whirling dervish known as Shams of Tabriz—that together explore the enduring power of Rumi's work. Ella Rubenstein is forty years old and unhappily married when she takes a job as a reader for a literary agent. Her first assignment is to read and report on Sweet Blasphemy, a novel written by a man named Aziz Zahara. Ella is mesmerized by his tale of Shams's search for Rumi and the dervish's role in transforming the successful but unhappy cleric into a committed mystic, passionate poet, and advocate of love. She is also taken with Shams's lessons, or rules, that offer insight into an ancient philosophy based on the unity of all people and religions, and the presence of love in each and every one of us. As she reads on, she realizes that Rumi's story mirrors her own and that

Zahara—like Shams—has come to set her free.

Unicist Business Objects Building Peter Belohlavek 2011-07 These books were written as consultation books to be used to solve problems. They are essentially analogous to medical books for individuals who decided to manage the concepts and fundamentals of things in order to manage the root causes of problems. Unicist Business Objects are adaptive systems that are designed to produce a predefined result in a process. By definition they deal with the adaptive aspects of businesses. There are five types of business objects which are: the drivers, the entropy inhibitors, the inhibitors, the catalysts and the gravitational objects.

Self-Confidence Charles Pépin 2019-12-31 Inspired by great figures from Emerson and Nietzsche to Madonna and Serena Williams, this engaging philosophical essay explores the workings of self-confidence and how to develop it. Where does self-confidence come from? How does it work? What makes it stronger or weaker? Why are some people more confident than others? Is it only a question of temperament or the result of conscious self-improvement? How do you get closer to those who stand out thanks entirely to their confidence in themselves? Drawing on philosophical texts, ancient wisdom, positive psychology, and a wide range of case studies that feature famous thinkers, artists, and athletes, but also unsung heroes such as a fighter pilot and an urgent-care doctor, Charles Pépin brings to light the strange alchemy that is self-confidence. In doing so, he gives us the keys to having more confidence in ourselves.

Algebra Essentials Practice Workbook with Answers: Linear and Quadratic Equations, Cross Multiplying, and Systems of Equations Chris McMullen, Ph.d. 2010-07-12 This Algebra Essentials Practice Workbook with Answers provides ample practice for developing fluency in very fundamental algebra skills - in particular, how to solve standard equations for one or more unknowns. These algebra 1 practice exercises are relevant for students of all levels - from grade 7 thru college algebra. With no pictures, this workbook is geared strictly toward learning the material and developing fluency through practice. This workbook is conveniently divided up into seven chapters so that students can focus on one algebraic method at a time. Skills include solving linear equations with a single unknown (with a separate chapter dedicated toward fractional coefficients), factoring quadratic equations, using the quadratic formula, cross multiplying, and solving systems of linear equations. Not intended to serve as a comprehensive review of algebra, this workbook is instead geared toward the most essential algebra skills. Each section begins with a few pages of instructions for how to solve the equations followed by a few examples. These examples should serve as a useful guide until students are able to solve the problems independently. Answers to exercises are tabulated at the back of the book. This helps students develop confidence and ensures that students practice correct techniques, rather than practice making mistakes. The copyright notice permits parents/teachers who purchase one copy or borrow one copy from a library to make photocopies for their own children/students only. This is very convenient for parents/teachers who have multiple children/students or if a child/student needs additional practice. An introduction describes how parents and teachers can help students make the most of this workbook. Students are encouraged to time and score each page. In this way, they can try to have fun improving on their records, which can help lend them confidence in their math skills.
